

O&O Defrag V8 Professional Edition Maximum Performance through Optimum Defragmentation!

The new O&O Defrag V8 Professional Edition for Windows-based workstations unlocks your computer's hidden performance. By securely repacking your hard disk's fragmented data back together, the operation of your hard disks can be streamlined to run with lightning efficiency. O&O Defrag V8 Professional Edition offers an extremely simple user interface with a multitude of important functions you won't find with other defragmentation software.

■ Defragmentation without limits

Fragmentation is the main cause of significant performance losses in Windows. Due to the fact that the hard disk is the slowest component of a computer, its optimization is an especially important issue.

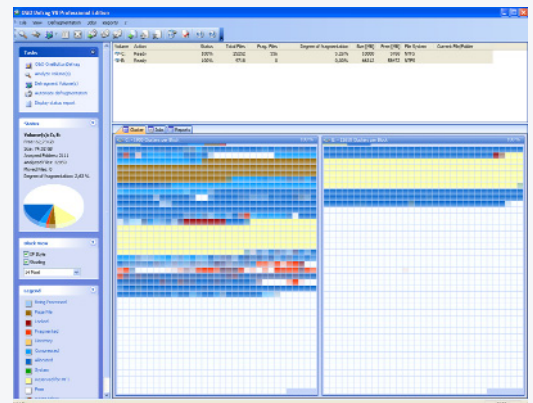

By using O&O Defrag V8, files can be read and written much more quickly. What at first seems to be lost performance can easily be rediscovered and realized again with O&O Defrag V8, giving you the peace of mind that your hardware is in good health and operating optimally. New technological developments also ensure you are getting the best efficiency at the lowest cost.

■ O&O OneButtonDefrag technology

The O&O OneButtonDefrag Technology lets you sit back and relax while the optimal defragmentation configuration is tailored directly to your system. A job is created and then executed, making performance improvements on your system faster than ever. Even in large networks, this sort of automation can lead to unbelievable savings in network administration resources.

■ Five different defragmentation methods

O&O Defrag V8 uses five different methods of defragmentation optimized to meet the individual needs of every system. As the world's only professional defragmentation software, O&O Defrag V8 enables you to use any of the five methods on partitions of

any size or number. Regardless of how many Megabytes, Gigabytes, or Terabytes your partitions contains; whether your hard drives are SCSI or IDE; or whether your hard drives are connected into RAID systems or not, O&O Defrag V8 quickly, simply, and securely gets systems running Windows NT4, Windows 2000, Windows XP, and Windows Server 2003 operating at their peak performance. Even a system running Windows NT4 Workstation with a 1.5 Terabyte hard disk capacity can be defragmented using O&O Defrag V8 Professional Edition economically and with the most modern technology possible. This is where other software manufacturers will draw the line, sometimes requiring you to upgrade to a Server or Enterprise Server edition at more than 20 times the cost you might pay for an O&O Defrag V8 Professional Edition license.

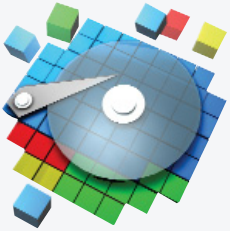

■ Screensaver Mode

New in Version 8 is the ability to activate O&O Defrag whenever Windows has activated its screensaver. As soon as the screensaver is ended by the user, defragmentation is paused. Continuing defragmentation at a later time is always possible since O&O Defrag can detect where it last left off.

This mode enables you to defragment your hard disk only when the computer is not in use, such as during your lunch hour or simply when you are away from your desk. This feature can be activated remotely for all computers on a network.

■ Power Management for Notebooks

The O&O IntelligentPowerControl technology was developed to specifically respond to the needs of mobile systems. As soon as your notebook is removed from the external power supply and is operating on its own battery, O&O Defrag V8 switches to pause mode, halting all defragmentation in the process. This ensures that no battery power will be consumed while defragging your hard disk, allowing you to get your work done at full power. Reconnecting your notebook to an external power source will automatically signal O&O Defrag V8 to continue its defragmentation.

Product Features

- Windows-Explorer-Integration - Defragment Drives direct in Windows-Explorer
- Simplified Application of Boot-Time defragmentation
- Defragmentation of all Windows supported Disks (RAID, removable disks, Memory Cards etc.)
- Execution of Batch Files before and after Defragmentation
- PowerManagement for Notebooks
- Five different Defragmentation methods
- No reduction in the size or number of Disks
- Screensaver Mode - Defragmentation with no time restraints during your break
- O&O OneButtonDefrag for automatic defragmentation
- O&O ActivityGuardPro for monitoring the System workload and adapting resources
- Use as a Client for O&O Defrag V8 Server Edition

System Requirements

- System with Intel® Pentium® 200MHz or comparable Processor
- 64 MB RAM
- 30 MB free Hard Disk space
- CD-ROM-Drive
- VGA-Graphic Card with minimum 800x600 with 256 colors
- Keyboard and Mouse
- Windows NT 4.0 SP6a Workstation, Windows 2000 Professional, Windows XP (all Editions)

Prices and Licensing

O&O Defrag V8 Professional Edition is available in single and volume license variations. Updates from older versions or competing products are also available. By purchasing an O&O Maintenance Agreement for your O&O Defrag V8 Professional Edition you can calculate all your software and support costs in advance, whilst also staying fully up-to-date with the latest O&O software versions.

As a supplementary offer, O&O Defrag V8 Professional Edition is also available, under specific terms and conditions, for educational institutions, public authorities and non-profit organizations.

Information on volume licensing of O&O Products can be found here: www.easylicensing.com

Product	Price in USD
O&O Defrag V8 Professional Edition (Single User License-Full Version)	49.95
O&O Defrag V8 Professional Edition (Single User License-Upgrade)	29.95
O&O Defrag V8 Starter-Kit (1 Server + 5 Professional Edition)	354.00
O&O Defrag V8 Starter-Kit (1 Server + 25 Professional Edition)	828.00

All prices do not include local taxes.
