

O&O Defrag V8 Server Edition

Network- wide Defragmentation for Maximum Performance!

The new O&O Defrag V8 Server Edition for Windows-Servers unlocks the hidden Performance of your computer. This software optimizes your hard disk and securely repacks fragmented files together. O&O Defrag V8 Server Edition boasts outstanding usability and a myriad of important functions not found in any other defragmentation software platforms on the market today.

■ Defragmentation without limits

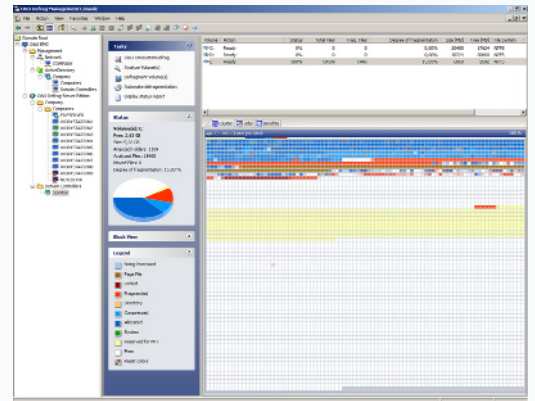

O&O Defrag V8 Server Edition is not only the ideal choice for all Windows based servers, but also includes O&O Defrag Network Management, enabling the administration of the O&O Defrag software across an entire network. In addition, O&O Defrag boasts a built-in software distributor (O&O ComponentInstaller) that makes the installation of software on client computers a matter of a few mouse clicks. Updates can also be easily integrated into the network by way of an intelligent version monitoring system.

■ Support of Microsoft Active Directory services

With the support of Microsoft Active Directory services, administrators can apply already existing network structures into the site structure of O&O Defrag V8. They can outfit all present client systems with the O&O Defrag Agent with just a few clicks of the mouse. They can plan the defragmentation of their clients systems or forward settings or jobs without the need for any additional software.

■ O&O AdvancedReportEngine

O&O Defrag V8 can document every action taken and create a detailed report for you. This enables you to examine the results of your defragmentation and also check up on the present condition of your hard disks. This functionality also works on a network. With O&O Defrag V8 Server Edition, you can produce customized reports for site structures of any complexity.

■ Network properties

With help from the integrated software distribution, O&O ComponentInstaller, you can install and update O&O Defrag V8 across a Network automatically.

With O&O Defrag V8 Server Edition you can connect yourself with another computer in your Network, and administer it as if you were sitting there yourself! This technology enables you to quickly and easily analyze certain computers on your Network. With O&O SiteControl you will receive a list of all computers in your Network with the relevant Status Information for each one. One click of a button and these can be defragmented – it couldn't be any easier!

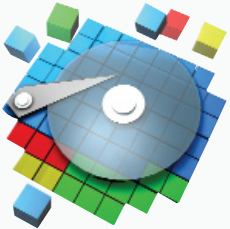

If you use Windows Active Directory services in your network, with the new O&O Defrag V8 you can use the Settings for separate Groups. O&O Defrag V8 fits into your existing IT infrastructure seamlessly, and can be installed automatically through the Windows software distribution.

■ Five different defrag methods

O&O Defrag V8 uses five different methods of defragmentation, each one achieving optimal results for the range of applications on each system. As the only professional defragmentation software worldwide, O&O Defrag V8 enables the application of all five methods on all partitions of every dimension. Regardless of how many Mega, Giga or Terabytes

your partitions comprise, whether you use SCSI or IDE hard disks or your hard disks are combined with a RAID system - O&O Defrag V8 enables easy, quick and secure file performance on servers running Windows 2000, 2003 or NT 4.0. Using state-of-the-art technology O&O Defrag V8 Server Edition can even defragment a Windows NT4 Workstation with a 4.0 Terabyte hard disk capacity. It offers all these features at an unbeatable price too. Other defragmenters functionality would either stop here or require you to purchase additional licensing options for high-volume servers. Sometimes this goes so far as to require an Enterprise Server license that will cost you more than five times that of a single O&O Defrag V8 Server Edition license.

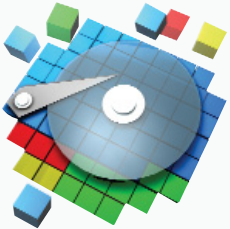

Product Features

- Integration in active directory and group directories for software distribution and configuration
- Simplified application of boot-time defragmentation
- Defragmentation of all Windows supported disks (RAID, removable disks, Memory Cards etc.)
- Execution of batch files before and after defragmentation
- Five different defragmentation methods
- No reduction in the size or number of disks
- Screensaver mode - defragmentation with no schedule during break time
- O&O OneButtonDefrag for automatic planning across the entire network
- O&O ActivityGuardPro for monitoring the system workload and adapting resources

System Requirements

- System with Intel® Pentium® 200MHz or comparable processor
- 64 MB RAM
- 30 MB free disk space
- CD ROM drive
- VGA Graphic Card with minimum 800x600 with 256 colors
- Keyboard and Mouse
- Windows NT 4.0 (all Editions), Windows 2000 (all Editions), Windows XP (all Editions) and Windows Server 2003 (all Editions)

Prices and Licensing

O&O Defrag V8 Server Edition is available in single and volume license variations. Updates from older versions or competing products are also available. By purchasing an O&O Maintenance Agreement for your O&O Defrag V8 Server Edition you can calculate all your software and support costs in advance, whilst also staying fully up-to-date with the latest O&O software versions.

As a supplementary license offer, O&O Defrag V8 Server Edition is also available, under specific terms and conditions, for educational institutions, public authorities and non profit organizations.

Information on volume licensing of O&O products can be found here: www.easylicensing.com
